

Axway EndPoints

Establish secure and direct connections with your trading community

Axway EndPoints enable you to establish secure and direct last-mile connections with your partners, suppliers and customers over the Internet — quickly, efficiently and reliably. Ranging from full-featured thick clients to zero-footprint web clients, Axway EndPoints need little to no configuration, deploy in minutes and have minimal management requirements. Once a connection is established, end users can immediately transfer files and exchange data with your enterprise hub — without having to worry about technical requirements.

Axway offers three endpoints to suit your business needs:

- **Activator** — a self-service, downloadable B2B connector that simplifies partner on-boarding.
- **Workstation** — a business service-oriented PeSIT client available as a GUI Java Applet or command-line application.
- **Secure Client** — a next-generation file-transfer client for exchanging files via HTTP/S, FTP/S, and SSH.

Key Features & Benefits	
Flexible connection options Establish last-mile connections that meet specific business process requirements and individual trading partner preferences	<ul style="list-style-type: none"> ▪ Manage communities of any size, making it easy for everyone in your business ecosystem to communicate with you ▪ Give end users easy access to your secure file-transfer infrastructure, no matter what systems they use or how technically adept they are ▪ Meet the full range of file-transfer needs, from ad hoc interactive transfers using a web browser to fully automated EDI and batch-transfer jobs on mainframe platforms
Business process automation and integration Collaborate with hundreds – even thousands – of partners, suppliers, customers, and other constituents	<ul style="list-style-type: none"> ▪ Automate endpoint provisioning and pre-configure functionality without writing a single line of code ▪ Integrate Axway EndPoints with Axway Gateways and other FTP and HTTP servers for a comprehensive B2B transaction and MFT solution ▪ Automate and move existing EDI and business integration processes to the Internet. Axway EndPoints can be used with any certified EDI-INT solution

Axway EndPoints

Axway Activator

Activator is a self-service, downloadable connector for simple partner on-boarding using the Internet protocols of your choice.

- End users can download the pre-configured Activator software and install it in just minutes.
- All members of your B2B community can easily exchange files with your organization, even with no technical expertise.
- Automatic profile synchronization ensures that information transferred between you and trading partners is always up to date.
- Each transaction is encrypted at the message level, ensuring that data is secure.
- Upgrade to Axway Interchange for even more robust community management.

Robust Visibility with Axway Activator

Axway Activator delivers robust visibility, security and governance features that enable you to manage and safeguard critical business information over the Internet.

- End-to-end tracking, reporting and real-time alerts give you complete visibility into transaction status and volume.
- Integrate with Axway Sentinel for additional visibility — including visibility into partner communities — through user-friendly dashboards.
- Transparently support multiple security protocols, data integrity checking and guaranteed delivery.
- Ensure compliance with industry standards and government regulations, as well as your own corporate security and auditability policies.

Provisioning Services for Axway Activator

Activator provisioning services establish a customizable web portal for automated registration and real-time on-boarding.

- Web service implementation lets you assemble a customized ramping methodology to meet your needs.
- Provide pre-configured Activator software to your partners to eliminate costly configuration errors.
- Monitor the entire provisioning process with real-time status updates on each partner.
- Available both as licensed software and as a hosted service.

Axway Workstation

Workstation is a service-oriented client for fast, easy and automatic partner provisioning.

- Choose from a zero-footprint Java Applet with a GUI, or a command-line batch application that enables integration with your partners' applications.
- Deploy low-cost, low-maintenance connections with minimal training required.

Provide pre-defined transfer services that allow your partners to send and receive files in client mode or batch at the end of a transfer, and monitor transfers end to end.

Axway Secure Client

Secure Client is a standalone file transfer client that works with Axway gateways and standard FTP and HTTP servers to deliver advanced file transfer functionality and security.

- End users can send and receive files on their PCs with full security, data integrity checking and guaranteed, traceable delivery.
- Supports HTTP/S with single-socket shared-server processing for large file transfers.
- Supports FTP/S for large file transfers, with a rich command set (mkdir/rmdir, mget/mput, rename).
- GUI and centralized dashboard allow users to monitor automatic scheduled batch transfers, manual transfers, and automated transfers initiated by applications in real time.
- Checkpoint restart establishes and restarts broken connections, resuming file transfers at the point the communication was lost.
- Provides flexible licensing options.
- Compatible with FTPCS, SecureTransport Client, and FDX from command line and GUI.
- Improves transmission times with compression for SFTP

Axway Web Clients

Fully integrated with Axway gateways, Axway Web Clients are low- to no-footprint HTTP endpoints with no software to install.

- Components are deployed and updated automatically, so your partners can connect immediately over the Internet.
- Users communicate with your hub using HTTP or HTTP/S and navigate via customized HTML screens — you have complete control over the end-user experience.

Choose from:

- **Browser Clients** — file-oriented interfaces for exchanging files over secure HTTP via Axway Gateway and Axway SecureTransport. Fully customizable templates are provided.
- **Rich Internet Client** — a Web 2.0-based interface for exchanging files over secure HTTP with Axway SecureTransport. This client enhances the user experience with drag-and-drop to the browser, overcomes the 2GB browser limit, and introduces MFT principles such as checkpoint/restart, pause, resume and MDN confirmation for transferred files.
- **WebEDI** — a forms-based Web application that provides standard EDI business processes to external partners that do not have their own EDI infrastructure.
- **WebTrader** — a browser-based interface for mailbox-based exchange of files over secure HTTP with Axway Interchange.
