

WSSA Features

Easy To Set Up

Just give us your domain name or an IP address and our scanning system will audit all points of entry to your web site, firewall or network. There is no software to download, script to install or equipment to purchase. At the completion of each scan we will provide a complete report of the risks we discovered - ranked according to their severity.

The Fastest Report Turnaround in the Industry

Get your reports as fast as within one hour. If you think you may have a security issue, you need to know now. Once you have installed the fix for each issue, get confirmation fast that the new code, patch or update resolved it.

Choose the Scan Frequency You Need

Included in Basic Service is one scan a week or month which is suitable for blogs or sites that do not have credit card processing . For sites that process payment transactions or collect confidential information from site visitors we recommend Standard or Advanced Services and their daily scans.

Increase Sales with a Beyond Security Seal for Your Site

Let your customers know how hard you work to ensure their safety and security. Gain their confidence and increase your sales by installing the Beyond Security seal early in the checkout process and on any pages that request customer data. Get the seal with Standard or Advanced Service levels.

Thorough Scanning of Your Site, Firewall and Servers

Most website scanners test only web page related vulnerabilities. WSSA also tests your website infrastructure. We'll test over 5,000 families of vulnerability and run tens of thousands of tests based upon the ports that are open and the services available. We'll test your site, firewall and servers beyond the level required for PCI Compliance.

New Risk Updates Daily

Our security team has decades of cumulative experience and we host the world's most frequently used reference site in the field of internet and network security: SecuriTeam.com. We are often the first to discover new attacks and are known as a source of early risk alerts within the security industry. We incorporate newly discovered issues into the WSSA test database and with each scan you will be notified of any new risks.

False Positive Prevention

Some commonly found combinations of software and hardware can appear to have a high risk even when none exist. WSSA will perform extra checks to prevent false reports of risks that don't actually exist.

Risk Solution Recommendations

WSSA provides you and your tech team with specific recommendations that will resolve issues that are discovered. Recommendations may include code revision, settings changes, software updates and operating system patches. Save time on researching for solutions and know that the actions you take will handle the risks we have discovered.

Complete, Actionable Reports

Our online, interactive reports include an overview for executives to measure progress made in reducing risks. And for the technical staff we provide links to more information about each risk and links to equipment vendor sites for updates and patches.

Security Risk Alerts by Email

Receive an email alert when a scan reveals a new security risk on your site or equipment. New risks are discovered and tests to discover them are added to the WSSA test database often, so your daily scan will occasionally reveal settings or patches that may have been okay yesterday, but now need attention.

Scan on Your Schedule

Advanced Service includes a scanning schedule function. Get your daily scan done and report delivered at the time of your choice. Make it the first thing your technical staff sees every day.

24/7 Unlimited Phone Support

Call either our US toll free number or UK number and reach a security specialist, day or night. We're here to provide the support you may need to put issue resolution recommendations into action.

New Vulnerability Alerts

Keep up to date on the international security scene with our email alerts. When new hacks are devised and implemented anywhere in the world, our staff will be the first to know. Even if a new vulnerability doesn't affect you now, your familiarity with new developments will help you stay ahead of the game.
