

Network Sentry / Analytics

A cloud-based service offering that Audits, Analyzes, and Reports the data collected by Network Sentry /NAC to visualize the trends in your network.

New Edge Devices

The volume and diversity of devices connecting to your wired and wireless networks is on the rise. Users, once leveraging well-understood corporate-issued devices, are now connecting many of their own devices such as smartphones, tablets, and laptops.

Organizations need to understand and manage the devices that are connecting to their network. This level of visibility and control is mandated by compliance regulations and it is critical to any organization trying to properly secure their network. As an IT professional, unknown and questionable devices on their network is certainly a blindspot that introduces risk and uncertainty.

A New Network Perspective

Network Sentry/Analytics provides a new perspective on the connections being made to your network. It leverages the existing network infrastructure and connection data collected by Network Sentry / NAC to deliver intelligent reports, through a cloud service, to keep you informed on the devices, users, and connections being made to your network.

Network Sentry/Analytics is delivered by a cloud service and integrates with Network Sentry/NAC requiring no infrastructure costs. IT leverages a highly scalable, fault-tolerant hosting facility suitable for the most demanding environments.

Network Sentry/Analytics can be leveraged to report on multiple Network Sentry/NAC servers. The data is aggregated from each server into a data mart and archived, analyzed, correlated, and reported. Roles and policies can be defined so the right set of reports are read by the right set of people.

Key Information that is Archived, Analyzed, Correlated, and Reported:

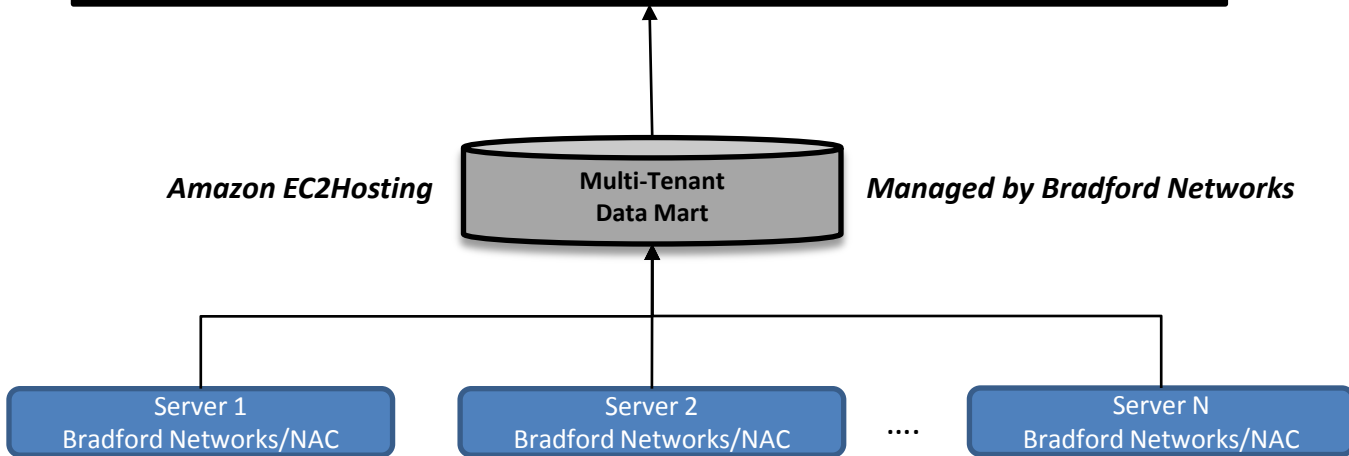

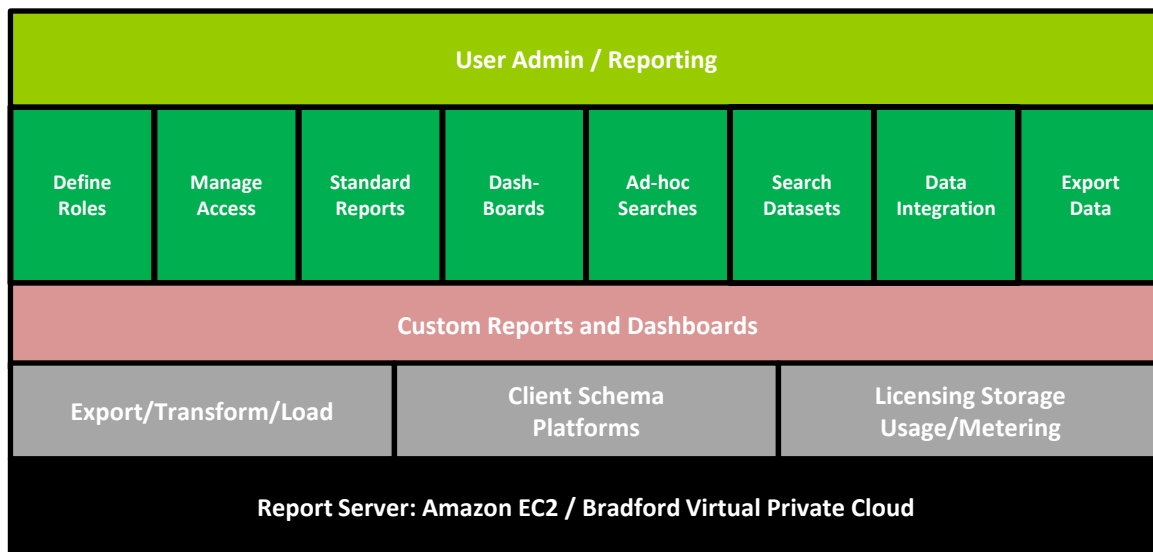

- User Names
- Operating Systems
- Device Types
- Managed Devices
- Unmanaged Devices
- Connection Points
- Connection Duration
- Appliance Health
- Network Alarms

Key Features/Benefits:

- No Infrastructure Costs
- Archive Connection Information
- Automated Report Distribution
- Customizable Reports
- Identify Rogue Devices
- Identify Device Trends
- Forecast Capacity
- Correlate Security Alerts

Bradford Networks Customers

Bradford Networks customers who have deployed Network Sentry/NAC can leverage this cloud-based analytics and reporting service. In addition to the standard set of reports, custom reports, dashboards, and third-party integrations can be added to enhance the value and perspective obtained by the analytics engine.
